Notice of Fee Increase on January 1, 2003

If a reply to a "Notice of Allowance and Fee(s) Due" is filed in the Office on or after January 1, 2003, then the amount due will be higher than that set forth in the "Notice of Allowance and Fee(s) Due" since there will be an increase in fees effective on January 1, 2003. See Revision of Patent and Trademark Fees for Fiscal Year 2003; Final Rule, 67 Fed. Reg. 70847, 70849 (November 27, 2002).

The current fee schedule is accessible from: <http://www.uspto.gov/main/howtofees.htm>.

If the issue fee paid is the amount shown on the "Notice of Allowance and Fee(s) Due," but not the correct amount in view of the fee increase, a "Notice to Pay Balance of Issue Fee" will be mailed to applicant. In order to avoid processing delays associated with mailing of a "Notice to Pay Balance of Issue Fee," if the response to the Notice of Allowance and Fee(s) due form is to be filed on or after January 1, 2003 (or mailed with a certificate of mailing on or after January 1, 2003), the issue fee paid should be the fee that is required at the time the fee is paid. If the issue fee was previously paid, and the response to the "Notice of Allowance and Fee(s) Due" includes a request to apply a previously-paid issue fee to the issue fee now due, then the difference between the issue fee amount at the time the response is filed and the previously paid issue fee should be paid. See Manual of Patent Examining Procedure, Section 1308.01 (Eighth Edition, August 2001).

Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at (703) 305-8283.

DETAILED ACTION

Allowable Subject Matter

1. Claims 1-27 are allowed.
2. The following is an examiner's statement of reasons for allowance: 1-27.

With respect to claim 1, Doner (U.S. Patent 5,758,090) is the closest prior art to the application invention, which discloses a base station controller, mobile station located therein and a base transceiver station associated therewith; and to determine a respective distance of each of mobile stations involved in a call connection within cell from base transceiver station; and base transceiver station having at least two carrier frequencies associated therewith (See Title, Abstract, Fig. 3, 4 & Co. 2, Lines 16-26).

Hattori (U.S. Patent 4, 947, 452) discloses Mobile Communication System. Hattori also discloses a base station controller, mobile station located therein and a base transceiver station associated therewith; and each of mobile stations involved in a call connection within cell from base transceiver station; and base transceiver station having at least two carrier frequencies associated therewith and zone switching controlling frequencies (See Abstract, Fig. 1, 3).

However, combined Doner and Hattori failed teaching a base station controller for adaptively configuring the structure of a cell served by base station controller, base transceiver station having at least two carrier frequencies associated therewith, base station controller comprising: measurement logic adapted to determine a respective distance of each of mobile stations involved in a call connection within cell from base transceiver station; first comparison logic adapted to compare each respective distance to a distance threshold to determine a number of mobile stations having respective distance less than or equal to distance threshold; second comparison logic adapted to perform a comparison of number to a channel threshold; and configuration logic adapted to switch between an overlaid/underlaid sub-cell structure having at least one of at least two carrier frequencies serving only a portion of cell and a normal cell structure having all of

at least two carrier frequencies serving the entire area of cell based on the results of comparison.

With respect to claim 13, Doner (U.S. Patent 5,758,090) is the closest prior art to the application invention, which discloses a telecommunications system, mobile station located therein and a base transceiver station associated therewith; and to determine a respective distance of each of mobile stations involved in a call connection within cell from base transceiver station; and base transceiver station having at least two carrier frequencies associated therewith (See Title, Abstract, Fig. 3, 4 & Co. 2, Lines 16-26).

Hattori (U.S. Patent 4, 947, 452) discloses Mobile Communication System. Hattori also discloses telecommunications system, mobile station located therein and a base transceiver station associated therewith; and each of mobile stations involved in a call connection within cell from base transceiver station; and base transceiver station having at least two carrier frequencies associated therewith and zone switching controlling frequencies (See Abstract, Fig. 1, 3).

However, combined Doner and Hattori failed teaching a telecommunications system for adaptively configuring the structure of a cell within a cellular network, cell having a plurality of mobile stations located therein, telecommunications system comprising: a base transceiver station within cell in wireless communication with plurality of mobile stations, base transceiver station having at least two carrier frequencies associated therewith; and a base station controller connected to base transceiver station, base station controller being adapted to measure a respective distance of each of mobile stations involved in a call connection within cell from base transceiver station, compare each respective distance to a distance threshold to determine a number of mobile stations having respective distance less than or equal to distance threshold, perform a comparison of number to a channel threshold and switch between an overlaid/underlaid sub-cell structure having at least one of at least two carrier frequencies serving only a portion of cell and a

normal cell structure having all of at least two carrier frequencies serving the entire area of cell based on the results of comparison.

With respect to claim 23, Doner (U.S. Patent 5,758,090) is the closest prior art to the application invention, which discloses a telecommunications system, mobile station located therein and a base transceiver station associated therewith; and to determine a respective distance of each of mobile stations involved in a call connection within cell from base transceiver station; and base transceiver station having at least two carrier frequencies associated therewith (See Title, Abstract, Fig. 3, 4 & Co. 2, Lines 16-26).

Hattori (U.S. Patent 4, 947, 452) discloses Mobile Communication System. Hattori also discloses telecommunications system, mobile station located therein and a base transceiver station associated therewith; and each of mobile stations involved in a call connection within cell from base transceiver station; and base transceiver station having at least two carrier frequencies associated therewith and zone switching controlling frequencies (See Abstract, Fig. 1, 3).

However, combined Doner and Hattori failed teaching a method for adaptively configuring the structure of a cell served by a base station controller, cell having a plurality of mobile stations located therein and a base transceiver station associated therewith, base transceiver station having at least two carrier frequencies associated therewith, method comprising the steps of: determining a respective distance of each of mobile stations involved in a call connection within cell from base transceiver station; comparing each respective distance to a distance threshold to determine a number of mobile stations having respective distance less than or equal to distance threshold; performing a comparison of number to a channel threshold; and switching between an overlaid/underlaid sub-cell structure having at least one of at least two carrier frequencies serving only a portion of cell and a normal cell structure having all of at least two carrier frequencies serving the entire area of cell based on step of performing.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
